

Name:

Trial System/Vocab:

Environment:

Goal to Target during the Trial:

Skill Target:

Recording Data:

Routine/Activity: What was happening? (e.g., snack, game, bedtime, shopping)**What support was provided?:** Support that was used (wait time, gesture, visual cue, verbal cue, model, etc.).**Response expected/Message produced:** Note what you hoped the AAC user would communicate AND what they actually communicated.**Notes:** Record any important observations related to communication, supports, challenges, or successes.**See the Companion Guide for more guidance.*

Level of Support

- **Wait** (Pause 10-15 seconds)
- **Gestural Cue** (Gesture or move AAC close)
- **Visual Cue** (Point to a word, symbol, or page)
- **Open-Ended Question/Hint** ("What do you think?" "What's next?")
- **Verbal Cue** (Model a possible response verbally.:
"Maybe say, I need help." or "You could say, help.")
- **Model** Provide a visual and verbal model on the communication system as an example (e.g., "You could say, ____.", "I would say, ____".)
- **Other** (Describe support provided)

Date	Routine/ Activity	What support was provided?	Response Expected and Buttons Pressed	Notes

Skill Target:

Date	Routine/ Activity	Starting Level of Support	What happened after support?	Message Produced	Ending Level Support

Notes & Observations (e.g., motivation, helpful supports, challenges, adjustments, or anything the team should remember):
